# Highest Ranged Detector Systems of the World

## 2D Real Time Graphic Metal & Cavity

*Excellent metal discrimination.*

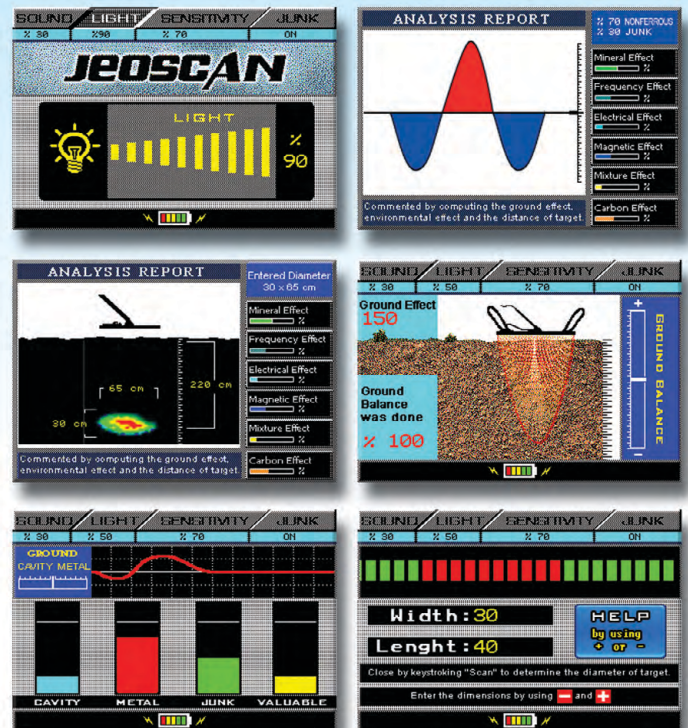

*Extreme depth. Jeoscan can detect metal and cavity targets.*

The **JEOSCAN 2D SYSTEM** has been the dream of both amateur and professional users for many years. It is equipped with the latest technology and is able to meet all the expectations of the consumer.

The system is unrivalled in its class with its metal, cave, tunnel and underground detection capability, superior metal discrimination feature and real time 2d target signal graphic results screen.

The system features a large colourful screen, surface recognition and automatic surface adjustment with a high accuracy in metal discrimination. The superior software relates the target signal shape and reports the results on the display screen in both size and shape of the target in full colourful graphics. All this is waiting for you in a dealer showroom near you with our guarantee of **Makro Detector**.

# JEOSCAN

## 2D System

The **Jeoscan 2D System** has a standard T44 Coil and can be used with the **T100 Deep Search Coil** (optional). The T44 coil has a dimension of 36 x 44 cm and can detect both shallow and deep metals, especially for metals which have been underground for many years. You will explore depths which no one has searched before with the T44 Coil.

**OPTIONAL**  
T100 Deep Search Coil  
60 x 100 cm

T44 Coil  
36 x 44 cm

The T100 Coil, which is provided based on your needs, is specially designed for big targets which have been underground for a long time. You will be able to achieve great results with the special search coil which has a dimension of 600 x 1000 cm and can be used by two people. This search coil is produced for our consumers who demand more depth. With the T100 coil, you will have smooth operation even in ground structures with the richest minerals without wasting time with ferrous metal trash like bottle caps and nails. Superior metal discrimination is the most important feature separating the T100 Coil from other search coils. Using a Jeosystem will allow you to see what hasn't been seen before.

Jeoscan 2D can discriminate metals into four groups such as **gold, steel, non-ferrous** and **ferrous**. This unique system can display metals which are next to each other and reports to the user the relationship between the metals in percentages. It also reports the target signal depth to the result screen with magnificent sensitivity. Thanks to its user friendly interface and graphic animations which guide users, the Jeoscan 2D system, is easy to use and practical. It makes a professional user out of a first time metal detectorist.

System (Control) Box

T44  
Search Coil

OPTIONAL

T100 Deep  
Search Coil

Search Coil	-	360 x 440 D Type	600 x 1000
Length	20 x 17 x 9	90 - 150 cm	-
Weight	1,2 kg	2,6 kg	8,45 kg
Audio Output		2W	
Headset Output		6.3 mm	
Transmission		Sinusoidal Wave	
Coil Frequency		12,5 kHz	
Operating System		VLF (Very Low Frequency)	
LCD		Yes	
LED		No	
Metal Discrimination	Non-Ferrous / Ferrous / Steel / Gold + Cavity		
Election Of Ferrous		Yes	
Depth Detection		Yes	
Ground Balance		Manual	
Service Life		4 Hours
